

SCHOOL (K-12)

COLLEGE / POST K-12

I had access to books in my native language.

I learned all about AI in school and had access to the latest AI tools and apps.

I had great teachers who cared about me, who were well-paid and well-trained.

My school had a well-resourced library with access to tech, textbooks, and databases.

I had \$ to spend on books, clubs, and sports.

I had access to meals, stable housing, healthcare, and transportation to school.

My school had diverse course offerings and small student-to-teacher ratios.

My school was not affected by book bans or partisan politics.

I am part of a diverse social network of students, staff, and teammates who support my learning and success in college.

I had access to premium AI tools and learning apps (GPT pro, Grammarly) in college and education on how to use them.

My college library provides access to any database, journal, or book I might need.

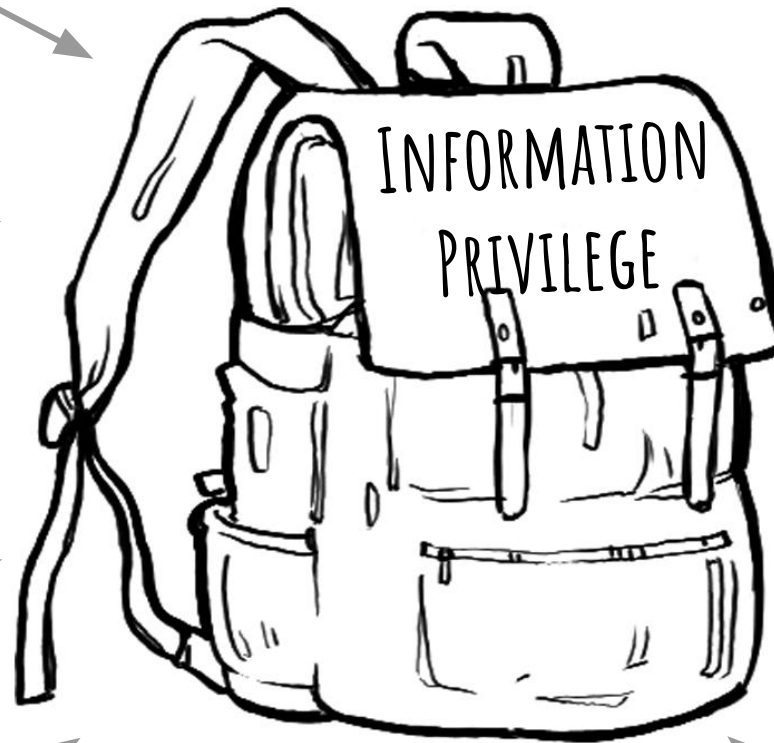

My university has a special collections library that encourages undergrad use.

I have a personal computer and smartphone with unlimited data.

My professor provides students with the full text to course readings.

I have the financial security to not work and focus on academics and extracurriculars.

My college is not impacted by budget cuts and gov't threats to academic freedom.

Inspired by Peggy McIntosh's 1989 essay, "[White Privilege: Unpacking the Invisible Knapsack](#)" and Char Booth's work on, "[Information Privilege.](#)"
